TITLE : PRODUCTION OF PIG-RAISING FEED

ABSTRACT : PURPOSE: To inexpensively produce the pig-raising feed safe because of not using an antibiotic, giving soft raw meats good in tastes, and giving carcasses not discolored for long periods.

CONSTITUTION: The method for producing the pig-raising feed comprises thermally sterilizing raw materials for the pig-raising feed at approximately 80-90°C, drying the sterilized raw materials to a water content of approximately 30-40%, adding lactic acid bacteria to the dried raw materials, and subsequently subjecting the mixture to a fermentation treatment for 3 days.
